

Infrastructure Identity Workshop

Lab Architecture – Initial Environment

Lab Architecture – What we're building?

Lab Activities

1. Create IAM roles and permissions to enable Session Manager
2. Create instances and install the SSM Agent
3. Configure and enable Systems Manager to manage the hybrid management
4. Create IAM users and policy restrictions based on tags
5. Configure logging
6. Confirm appropriate access and review logs
7. Create an instance and install EC2 Instance Connect
8. Confirm appropriate access
